Skidding systems

SKD400/200

CLP designs and manufactures high-capacity skidding systems. Extremely easy to operate, our systems can move large loads safely.

No tools are required to set up SK400/200!

The design of the CLP system allows the shifting elements to be used as a "pusher" or a "puller".

CLP skidding system can be virtually controlled by any hydraulic power unit, but the CLP power pack fulfills specific needs of the skidding operations.

Compact and very strong, the CLP shifting system is an efficient support for even the most demanding projects.
